Empirical Proof Record — **REFUTED**

Proof ID: 8c7306acee3769380751e4e4bb7a8336...

Created: 2026-05-24T03:31:55.462164+00:00

1. Claim

When fed text describing Kimera's own primitives, the substrate's dissonance signal (`dissonance_events_count`) is measurably higher than on neutral text — Cohen's d effect size ≥ 0.30 (one-sided, self-referential > neutral). A REFUTED verdict means the substrate does not differentially process content about itself.

- **Operationalisation:** Cohen's d effect size on per-cycle `dissonance_events_count` between the self-referential group and the neutral group (pooled-variance form, one-sided)
- **Threshold:** `dissonance_cohens_d_self_ref_vs_neutral` ≥ 0.3 `cohens_d`
- **H0:** Cohen's d < 0.30 (substrate does not differentiate self-referential content)
- **H1:** Cohen's d ≥ 0.30 (substrate differentially processes content about itself)

2. Verdict

REFUTED — observed -0.13162162750960466

Cohen's d (`self_ref` - `neutral`)/`pooled_sd` = -0.132; `self_ref` dissonance: n=30 median=4.5 mean=7.70 (range 0-21); `neutral` dissonance: n=10 median=7.5 mean=8.60 (range 0-23); Mann-Whitney U=145.5, one-sided p=0.5623; 40 cycles, 0 adapter errors

3. Evidence

Pillar	Statistic	
0.philosophical.cohens_d	dissonance_cohens_d_self_ref_vs_neutral	-0.131621627
0.philosophical.mannwhitneyu	dissonance_mannwhitneyu_p_value	0.56225796
0.philosophical.self_ref_dissonance	self_ref_dissonance_median	
0.philosophical.neutral_dissonance	neutral_dissonance_median	
0.philosophical.self_ref_phi	self_ref_phi_median	0.65243452
0.philosophical.neutral_phi	neutral_phi_median	0.63607551
