Empirical Proof Record — VALIDATED

Proof ID: e480e88ad24b6524c657d78882f16954...

Created: 2026-05-24T15:05:31.481645+00:00

1. Claim

The faithful percept door (cosine-LSH $\rightarrow$ prime chain, assign_from_percept) preserves a learned sense's discrimination into prime space: deposited-chain prec@5 ≥ 0.80 on real held-out Heimdall/CIFAR addresses, near the address ceiling and far above the web-feel readout (~ 0.36).

- **Operationalisation:** Cached real Heimdall addresses for held-out CIFAR $\rightarrow$ live ArachneProtocol.assign_from_percept $\rightarrow$ the deposited prime chain (from the unified registry's chain index); prec@5 via bag-of-primes cosine, vs the address's own cosine prec@5 (the ceiling).
- **Threshold:** percept_chain_prec_at_5 ≥ 0.8 precision@5
- **H0:** H0: chain prec@5 < 0.80 — the door collapses the percept entering prime space
- **H1:** H1: chain prec@5 ≥ 0.80 — a faithful percept door

2. Verdict

VALIDATED — observed 0.8569444444444444
deposited-chain prec@5 0.8569 over 144 real Heimdall addresses (6 classes, chance 0.167); address ceiling 0.9056; retention 0.95 (vs the web-feel readout ~ 0.40)

3. Evidence

Pillar	Statistic	Value	95% CI
percept_prime_discrimination	percept_chain_prec_at_5	0.8569444444444444	(0.0000, 0.0000)

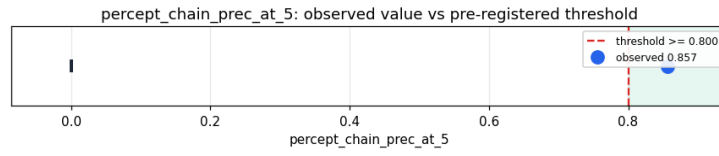

Figure 1: percept_chain_prec_at_5 – observed value with Wilson 95% CI.
