1. Claim

On sentence-aligned parallel text, Kimera's Rosetta layer maps the same sentence content to the same canonical address in $\geq 80\%$ of sentence groups when 10 languages are sampled per group (the universal-semantic-address promise).

- **Operationalisation:** fraction of FLORES-200 sentence groups for which Kimera's Rosetta returns a single distinct canonical value across 10 randomly-sampled language translations of the same sentence
- **Threshold:** `rosetta_canonical_agreement_at_k10` ≥ 0.8 fraction
- **H0:** canonical agreement at $K=10 < 0.8$
- **H1:** canonical agreement at $K=10 \geq 0.8$

2. Verdict

INCONCLUSIVE — observed 0.0

Rosetta canonical agreement at $K=10$: 0/1 groups all-agree (0.0%); prime agreement at $K=10$: 0/1 (0.0%); 40 cycles, 0 adapter errors; too few complete sentence groups to decide

3. Evidence

Pillar	Statistic	Value	95% CI
0.rosetta.canonical_agreement	rosetta_canonical_agreement_at_k10	0.0	(0.0000, 0.7935)
0.rosetta.prime_agreement	rosetta_prime_agreement_at_k10	0.0	(0.0000, 0.7935)

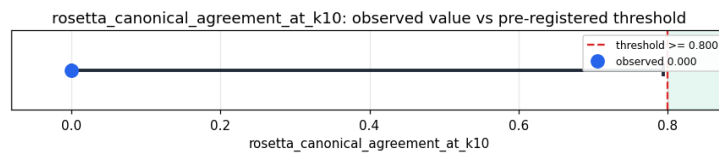

Figure 1: rosetta_canonical_agreement_at_k10 – observed value with Wilson 95% CI.
