Empirical Proof Record — VALIDATED

Proof ID: 2efaa20df147d23985c7645a79543c66...

Created: 2026-05-24T02:56:48.978312+00:00

1. Claim

The substrate's response to the number ZERO collocates with its VOID/collapse state (contradiction stimuli) more than with idle rest (neutral stimuli): $\text{zero_void_proximity} > 0$.

- **Operationalisation:** Stream four stimulus conditions (neutral, zero, numbers, contradiction) through the full entity cycle; per condition, take the mean over cycles of the substrate's void-class (void/null/contradiction/collapse/dissonance) and entropy-class (entropy/varentropy/uncertainty) raw fields; z-normalise across conditions; $\text{zero_void_proximity} = \text{dist}(\text{zero}, \text{neutral}) - \text{dist}(\text{zero}, \text{contradiction})$.
- **Threshold:** $\text{zero_void_proximity} > 0.0$ z-distance
- **H0:** H0: zero sits nearer rest than the void ($\text{proximity} \leq 0$) — zero is absence
- **H1:** H1: zero sits nearer the void than rest ($\text{proximity} > 0$) — zero is the void

2. Verdict

VALIDATED — observed 1.6599392571775624

$\text{zero_void_proximity} + 1.660$ ($\text{dist}(\text{zero}, \text{rest})=9.999$, $\text{dist}(\text{zero}, \text{void})=8.339$); void-real $\text{dist}(\text{void}, \text{rest})=8.718$; plenum $\text{entropy}(\text{void})/\text{entropy}(\text{rest})=1.168$; 50 void/entropy fields

3. Evidence

Pillar	Statistic	Value	95% CI	Library
zero_as_void	zero_void_proximity	1.6599392571775624	(0.0000, 0.0000)	numpy 2.4.4

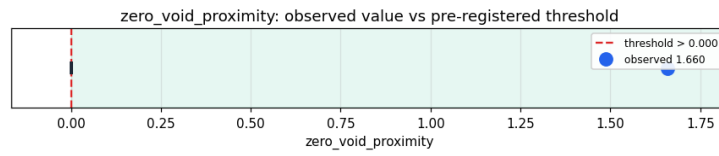

Figure 1: zero_void_proximity – observed value with Wilson 95% CI.
