1. Claim

Under sustained load on a balanced text corpus, Kimera’s entity target completes each cycle in under 4.00 seconds at the 95th percentile (the architectural throughput ceiling).

- **Operationalisation:** 95th-percentile of per-cycle wall-time (raw[‘cycle_seconds’]) across the streamed batch; cycles that failed to record a cycle_seconds are excluded from the denominator
- **Threshold:** p95_cycle_wall_time_s <= 4.0 seconds
- **H0:** p95 wall-time > 4.00s
- **H1:** p95 wall-time <= 4.00s

2. Verdict

INCONCLUSIVE — observed 0.0

measured per-cycle wall-time on 0/200 cycles (0 adapter errors); distribution: median 0.00s, p95 0.00s, p99 0.00s (range 0.00-0.00s); batch totals: wall 222.04s, cpu 243.85s (periodic_subprocess_sampler), rss_peak 4593.2MB, max threads 80, max procs 2; too few cycles measured to decide
