1. Claim

On sentence-aligned parallel text, Kimera’s Rosetta layer maps the same sentence content to the same canonical address in $\geq 80\%$ of sentence groups when 10 languages are sampled per group (the universal-semantic-address promise).

- **Operationalisation:** fraction of FLORES-200 sentence groups for which Kimera’s Rosetta returns a single distinct canonical value across 10 randomly-sampled language translations of the same sentence
- **Threshold:** `rosetta_canonical_agreement_at_k10` ≥ 0.8 fraction
- **H0:** canonical agreement at K=10 < 0.8
- **H1:** canonical agreement at K=10 ≥ 0.8

2. Verdict

REFUTED — observed 0.0

Rosetta canonical agreement at K=10: 0/20 groups all-agree (0.0%); prime agreement at K=10: 0/20 (0.0%); 1000 cycles, 0 adapter errors

Figure 1: `rosetta_canonical_agreement_at_k10` – observed value with Wilson 95% CI.
